Register and sign in

Start with Cosmos Community, then access the workshop.

STEP 1 / BEFORE YOU CONTINUE

Register at Cosmos Community

You must visit the community page below and register for an account.

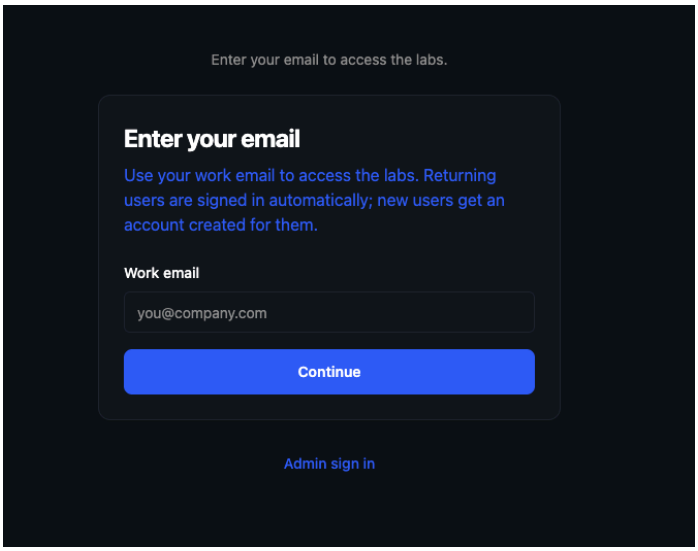

https://community.vastdata.com/c/workshop

Once registered, you will see a link on the community page to proceed to the Builders Challenge Workshop.

2 Sign in to the workshop

On the workshop login screen, enter the **same email address you registered with**, then click **Continue**.

Returning users are signed in automatically. New users get an account created for them.

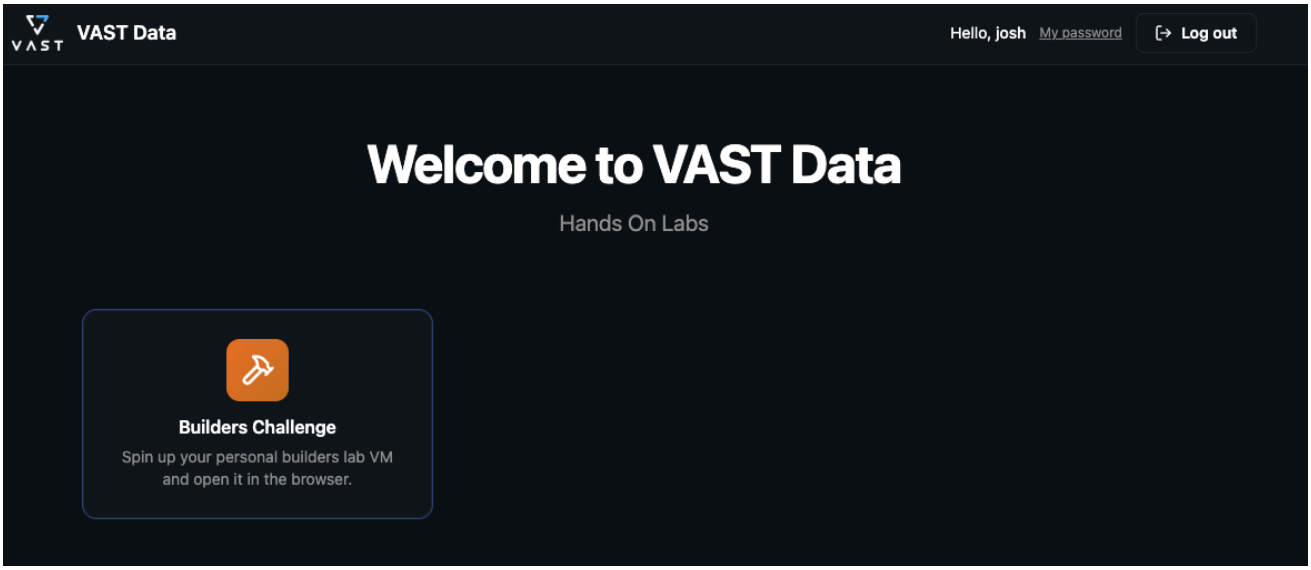

Open the Builders Challenge lab

Choose the lab and enter the workshop passcode.

3 Choose Builders Challenge

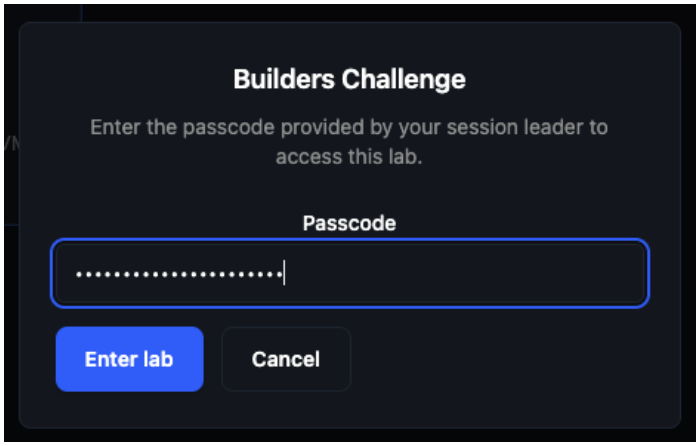

On the workshop home screen, click the **Builders Challenge** tile.

4 Enter the lab passcode

Enter the passcode exactly as shown on the slide, then click **Enter lab**.

Lab passcode: <See Slide for Passcode>

Join your assigned team

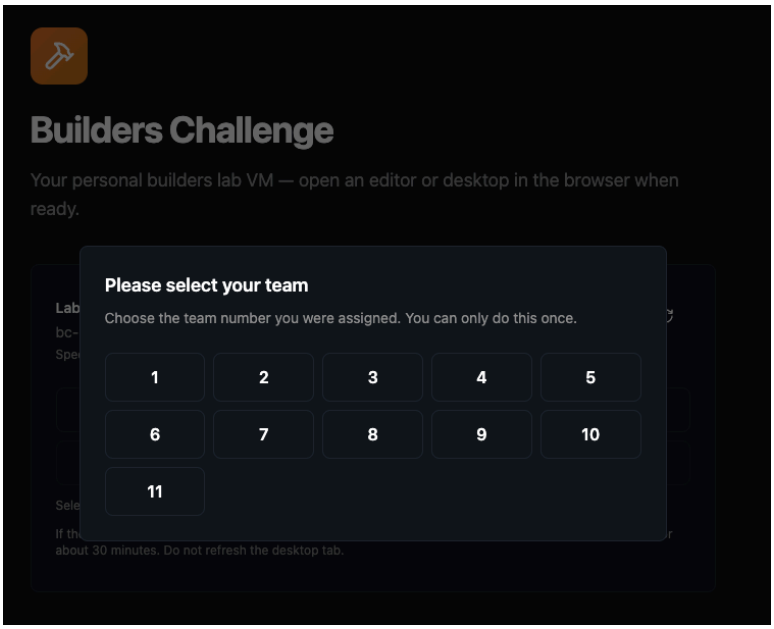

Double-check your team number before you confirm.

Choose carefully: The team-selection screen says you can only choose once. If you do not know your team number, ask the coordinator before continuing.

5 Select your team

Have your assigned team number ready. Click the number given to you by your workshop coordinator.

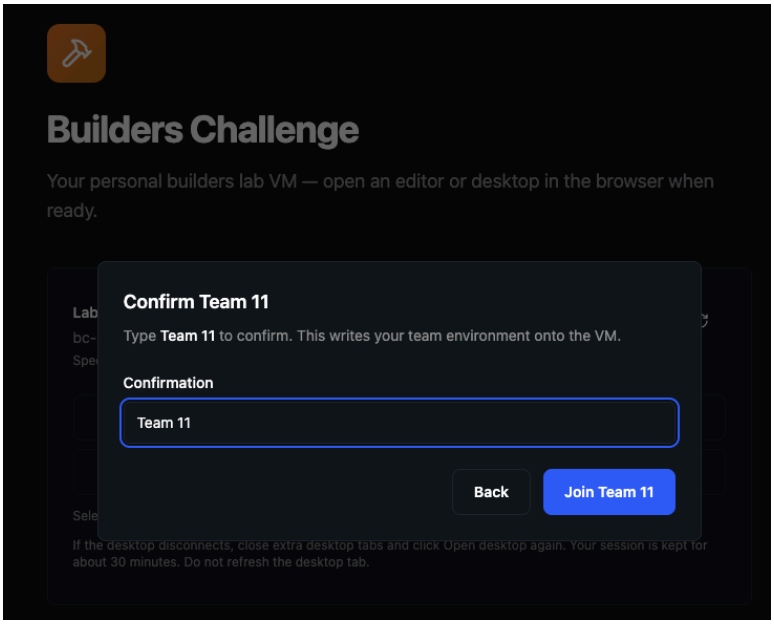

If you have already joined a team, this prompt may not appear. Continue to step 7.

6 Confirm your team

Type the confirmation text exactly as requested on screen, then click **Join Team [number]**.

Example: For Team 11, type **Team 11** and click **Join Team 11**. Use your own assigned team number.

The screenshots show Team 11 as an example.

Your lab page

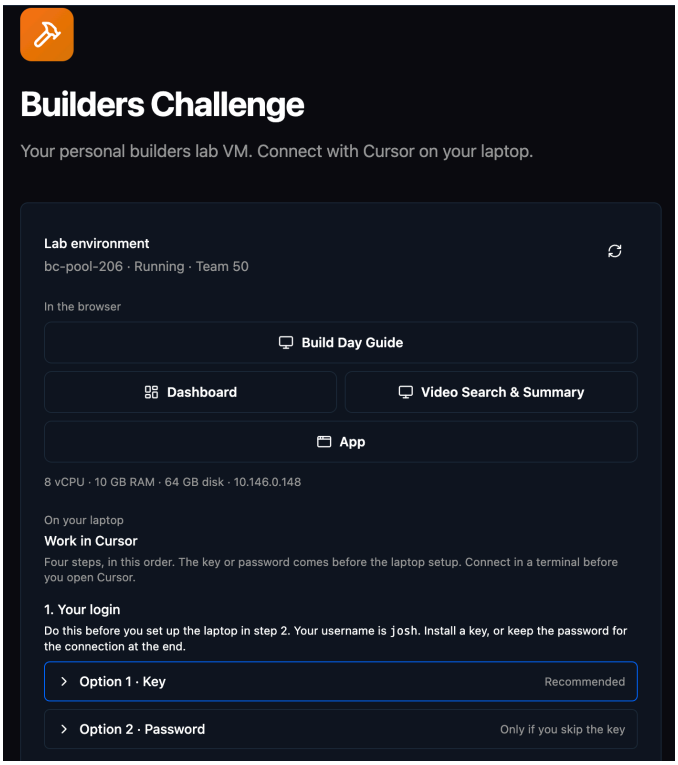

Wait for your lab environment to finish setting up.

7 Open your workshop tools

Once setup finishes, the lab page shows your VM, your team, and the tools under **In the browser**.

Build Day Guide	Open the instructions for the build day.
Dashboard	Open your team's dashboard.
Video Search & Summary	Open your team's tool. Your coordinator will explain how to use it.
App	Open your team's app.

Below the tools are the steps you run **on your laptop**. They walk you through connecting with Cursor, the last step before you start building.

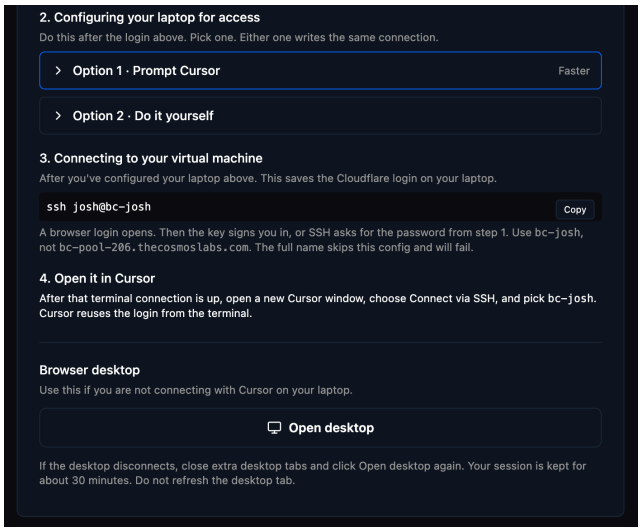

Shown for user josh on Team 50.

Connect with Cursor

Work in Cursor on your own laptop over SSH. This is the recommended way to build.

8 Work in Cursor

Follow the four parts under **Work in Cursor**, in order.

1. **Your login.** Your username is shown on the page. Pick **Option 1 · Key** (recommended), or **Option 2 · Password** if you skip the key.
2. **Configure your laptop.** Pick one: **Prompt Cursor** (faster) or **Do it yourself**. Either one writes the same connection.
3. **Connect in a terminal first.** Copy the command from the page, for example `ssh josh@bc-josh`. A browser login opens, then your key signs you in, or SSH asks for your password.
4. **Open it in Cursor.** Open a new Cursor window, choose **Connect via SSH**, and pick `bc-<username>`. Cursor reuses the terminal login.

Use the short name. Connect to `bc-<username>`, not the full `bc-pool-NNN.thecosmoslabs.com` hostname. The full name skips the laptop config and will fail.

Can't use Cursor on your laptop? Use **Open desktop** at the bottom of the lab page for a virtual desktop in the browser. If it disconnects, close extra desktop tabs and click **Open desktop** again. Do not refresh the desktop tab. Your session is kept for about 30 minutes.
